Re: Specifications for Invention
Mobile Telephone Alarm System
Cellular Alarm for Cars

This product will provide an alarm system for cars that are connected to the mobile cellular telephone systems. The car alarm system will have no apparent sound but the connection to the mobile telephone will alert the mobile telephone owner of the attempts to break into his car. The alarm connected to the cellular phone will make the cellular phone to ring with different types of sounds and pictures that will flash on the screen of the cellular phone on and off when the car alarm system is activated. The cellular phone will have a specific button incorporated in the cellular phone or a specific coded number on your menu or with any specific numeration provided by the mobile phone cellular industry. If the car has been started or if the motor was started from the ignition, it will show a picture related to the incidents, which are to be, send to the cellular phone screen. The connection of the mobile telephone alarm system with and into the automobiles' alarm system using sounds, cellular calls and pictures flashing on and off, on the cellular phones of the owner of the car are the sole property of Mobile Telephone Alarm System, cellular alarm for cars for which this patent is being requested. The Mobile Telephone Alarm System, cellular alarm for cars might be use by the cellular phone towers. This system might be possible (like) a low jack system with the cellular phone towers using booms and/ or microwaves to locate the vehicle. This unit can be simple to add as a feature to the cellular phone and a simple alarm system to your car. Therefore, phone companies can charge a fee for the phone service and alarm system to the car. Also, it could be incorporated to the home alarm system. The internal incorporation of the car alarm system into the mobile cellular phone will be by electronically design and/or any means necessary to establish the connection.

How the Mobile Telephone Alarm System, cellular alarm for cars, will work?
Examples: If you are in a meeting, bar, restaurant, store, home or any place away from your car and the car alarm is activated, How will you know? You will be alerted by your phone. A picture of a car, a truck or all types of automobiles will be on the cellular screen along with sounds and a flashing screen to alert you as programmed into the cellular unit. If you are away from your car and the car alarm is going off, it will be program into the cellular phone as if you have a phone call or using pictures and diverse sounds.
